Due to the most bounteous and overwhelming probability that 160 will be unusable down in the CW end of the world, due to preemptive first strikes by the Contesters (it is fine to let them loose on the band for an occasional weekend), the alternate Glowbugging QRG of 3535khz at 0200-0600Z will be in effect for Friday night (Saturday RADAY) and Saturday night (Sunday RADAY) this coming weekend. Sunday night all will return to the quiet bedlam of traditional QRN on the top band. See you on the alternate QRG, same QTR, Friday and Saturday nights.

p.s. This will give the left coast folks a chance to chime in, because the skip should be good maybe as far as the left coast in the wee small hours provided the MUF is not pushed too hard.

Several years ago, Antique Electronic Supply sold hardwood bases on which old tubes could be placed for display purposes. I can't find them anymore in the AES catalog. Does anyone know of another source for these bases?

Thanks.

Jim Rybak W0KSD

Remember.....

Friday and Saturday nights (Saturday/Sunday RADAY) the alternate QRG of 3535khz at the standard QTR of 0300-0600Z will be used for Glowbugging, because of the 160m CW contest this weekend. If you don't hear anyone, call periodically with something like:

CQ GLOWBUGS CQ GLOWBUGS DE yourcall yourcall K

to rattle the bushes and start things rolling. The short wave of 84R87 meters should give the folks out on the left coast a chance to join in. Don't worry about how fast/slow/good/bad/ugly/QLF/etc your fist is, just join in on the rattle 'n banging of the ol' brass monkey, and have a good time. Everyone can learn something, contribute something, and mebbe even

get the ol' glass elbow oiled up a bit by chiming in on the round tables.
I will probably run the Grand Dame ``Big Bertha Radiomarine'' although if
the band is good I might fire up lil' Miss Hartley at a couple of watts.
If the activity is hot, I might stick around until 0800Z if the eyeballs
remain open and the java pot stays warm.....(:+{}.....
